

X = (a + qe)

 $X = (4 2 \frac{2}{4})^{2/2} (4/2)^{2/2}$   $\sqrt{\alpha(x - 3/4)^{2/2}}$ 

 $\sum_{a=2}^{3} a \cdot z = \sum_{b=3}^{3} = \frac{1}{4} \frac{3x - at}{\omega x - d/x^2}$ 

 $\sum_{2}^{3} \alpha = \frac{4}{2} \frac{x}{3} = \xi(-b)$ 

 $a = \frac{3+}{4} + 3dd = \frac{2/+3}{32}$
